Responsive Personal Portfolio

Option 1: Demo your portfolio (coded from scratch)

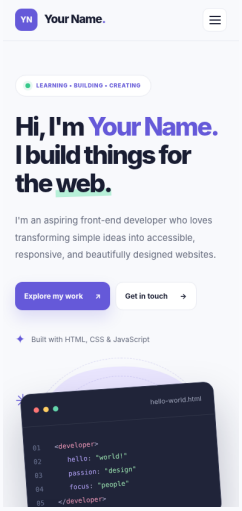

A custom, mobile-friendly portfolio built with semantic HTML5, custom CSS3, and vanilla JavaScript. It includes About, Skills, Projects, and Contact sections.

01 VISUAL DEMONSTRATION

DESKTOP / 1440px

MOBILE / 390px

02 WHAT THE SITE INCLUDES

- **Semantic structure**
  Header, navigation, main content, distinct sections, and footer.
- **Custom responsive design**
  Grid and Flexbox layouts; mobile styles and readable typography.
- **Working interactions**
  Project filters, light/dark theme, responsive navigation, automatic year.
- **Accessibility basics**
  Keyboard focus indicators, skip link, labeled controls, reduced-motion support.

Rubric evidence & submission notes

Demonstration notes and transparent validation status

03 REQUIREMENT CHECKLIST

HTML / W3C

HTML5 doctype, semantic elements, headings, alt/ARIA where relevant, mobile viewport. The official W3C Nu Checker must be run once the site is online; no W3C passing result is claimed here.

Responsive

Checked in Chromium at desktop 1440px and mobile 390px. Neither layout produced horizontal scrolling.

Well-styled

Separate custom CSS stylesheet, card components, consistent spacing, typography, color system, and light/dark themes.

Four extras

Functional dark-mode toggle, working project filtering, mobile navigation, and automatic copyright year.

Functional checks

Browser smoke tests verified filter counts (3 -> 1 -> 3), theme toggle, mobile menu open/close, and no JavaScript page errors.

04 HOW TO REVIEW THE PROJECT

1. Open index.html in a modern browser and explore the portfolio sections.
2. Try project category filters and the light/dark theme button.
3. Resize the browser or enable Device Toolbar to show the mobile layout.
4. After hosting, validate the real website URL at https://validator.w3.org/nu/ and save a screenshot.

05 COPY-READY PROJECT DESCRIPTION

This is my responsive personal portfolio website, created using HTML5, CSS3, and JavaScript. It introduces my learning journey and skills, and presents sample project concepts in a clear, modern layout. The site adjusts to desktop and mobile screens, and features interactive project filters, a theme switcher, and a mobile navigation menu. I focused on semantic markup, accessibility basics, and consistent custom styling.

BEFORE YOU SUBMIT

Replace "Your Name" and the sample email; review the sample projects; publish your own URL; run W3C validation. Follow your course rules when using AI assistance.
